Introduction

This Annual Planning Information (API) Report for fiscal year 1983 is compiled primarily for use by socio-economic planners. It contains a wide range of information on the population, employment, occupations, and socio-economic characteristics of the state. There is a chapter which deals specifically with the Boise SMSA (Ada County) which is Idaho's only Standard Metropolitan Statistical Area.

Description of Area.

Idaho is located in the northwest United States. It is bordered by Washington, Oregon, Nevada, Utah, Wyoming, Montana and Canada. It is a sparsely populated state with a varied terrain of sagebrush, prairie and mountains. The Clearwater, Salmon, Lost River and Bitteroot Mountains are among the mountain ranges found inside the state's borders along with the Salmon, Clearwater and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting and fishing have helped to make tourism and recreation a large and growing industry in the state.

Idaho has traditionally been an agricultural state but recent years have seen manufacturing, especially electronics, rapidly gaining importance Livestock, cattle especially, is important to the economy. Major crops grown by Idaho's farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and "famous" potatoes. Major manufacturing industries include food processing, forest products, phosphate processing into fertilizer, and electronics. Mining has played an important role in the development of the state with phosphate rock, silver, lead, and zinc among the resources being mined. Economic conditions of the last few years have caused a drastic reduction in the importance of mining to the state's economy. The forest products industry has also experienced a significant slowdown in recent years due to the poor economic climate.

Boise SMSA

There is only one Standard Metropolitan Statistical Area (SMSA) in Idaho which consists of all of Ada County. The Boise SMSA, located in the southwestern part of the state, has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada County has a mild climate and experiences four definite seasons during the year. Although the city itself is green with trees and other plants, the surrounding area is naturally desert-like and farmers must rely heavily on irrigation to maintain their crops.

The other cities and towns of Idaho although smaller than Boise, are spread throughout the state in a mixture of urban and rural areas and allow for a variety of lifestyles.

Highlights

Although traditionally Idaho remained isolated from the fluctuations of the national economy, the current national recession has had a major impact on the state.

High interest rates continue to stifle the Construction and Lumber and Wood Products industries. The closure of Bunker Hill Mining Company in 1981-82, due to low demand for lead and zinc and depressed silver prices, resulted in a loss of 2,100 jobs at the northern Idaho mine and affected business throughout the state.

Idaho is among the fastest growing states in the nation. The population had grown quickly in the last few years as people migrated into the state. This trend has slowed considerably as the economy has slowed, however, Idaho is still expected to experience growth in the coming years.

There was a 32.5 percent increase in population from the 1970 census to the 1980 census and a 4.0 percent increase is predicted from 1980 to 1983.

Because the economy is not improving at a rapid rate, the labor force is expected to be 440,000 which is only 1.8 percent above the 432,030 in the 1980 labor force. The number of unemployed is estimated to be 26,400 with an unemployment rate of 6.0.

The recession has had wide reaching effects across the state. Even if improvements come during the latter half of 1982, it will take many months for the economy of Idaho to recover from the national recession.

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in formulating these projections. In the past, the Lawrence Berkeley Laboratory at the University of California participated in the development of the projections however, with current funding cuts their cooperation was not available this year.

The population continues to increase although, at a slower rate. The state population is expected to be 981,877 in 1983 which is a 4.0 percent increase over the 1980 census.

A powerful element affecting Idaho's growth, the birth rate, continues to run well above the national average. According to the Bureau of Vital Statistics, the Idaho birth rate was 21.3 per 1,000 population. Idaho's fertility rate is 36 percent higher than the national rate. The estimated fertility rate in 1980 was 93.8 live births per 1,000 women 15-44 years in age. This is a decrease from 1979 when the fertility rate was 97.2 live births per 1,000 women. This decrease is due in part to the overall increase in population. However, because the 1979 rate was based on estimates of population and not census data, the actual decrease is difficult to measure.

Along with tables giving 1983 population data this API report also includes 1980 census data on population which are now available.

Figure A shows an age and sex distribution for fiscal year 1983. Table 3 gives this information from the 1980 census. The 1980 census gives the median age of the Idaho population at 27.6 years; for males it was 27.0 years and for females 28.1 years. Table 4 provides a breakdown by county of males and females for 1980. In the 1980 census, females comprised 50.1 percent of the population. This has not changed from the 1970 census.

Table 6 illustrates a comparison of 1970 and 1980 census data for races. The nonwhite population increased during those ten years. American Indians increased from 0.94 percent of the total population in 1970 to 1.11 percent in 1980. The Other category grew from 0.69 percent to 3.08 percent in 1980. This increase may be partly due to differences in collecting data from 1970 to 1980.

In 1970 the Census Bureau classified Hispanic persons in Idaho on the basis of a 15 percent sample question regarding Spanish language. Those persons were counted as White. In 1980, on the survey forms sent to everyone, the determination of Spanish/Hispanic origin was made by the person filling out the census form.

The Census Bureau does not treat Spanish/Hispanic origin as a racial category; that is, although persons may be listed in this classification they will also be found in a racial category such as White or Black. In 1980 persons listing themselves as Hispanic many times also marked the Other category for race. This would account for some of the increase of Other from 0.69 percent to 3.08 percent.

The Hispanic population has increased from 2.59 percent of the total in 1970 to 3.88 percent in 1980. Because of the differences in data collection these two years are not strictly comparable. The 1980 census is probably a more accurate representation of this group of people although the classification still remains a subjective judgement.

* The Spanish/Hispanic count is an ethnic rather than race classification. Persons included with this heading are also included in a racial category.

Labor Force and Employment Status

To be considered in the labor force a person must be 16 years old or older and employed or unemployed and looking for work. The term "Civilian Labor Force" excludes members of the Armed Forces. The Department of Employment deals primarily with the Civilian Labor Force.

The labor force is projected to be 440,000 in 1983 which is only 1.8 percent above the 432,030 people in the 1980 labor force. Table 7 gives the labor force projections for FY 1983 by age and sex. Figure D graphs the changes in the labor force from 1966 to 1980 and 1983. Figure G does the same for employment figures.

The labor force participation rate gives the relationship of the labor force to the 16 years and older population. There are no census data yet available giving sex and racial breakdowns of the labor force for 1980. Table 8 shows the projected FY 1983 labor force participation rates by age and sex.

The labor force participation rates are shown graphed for men in Figure E and women in Figure F. With the exception of youth, which increased in 1980 and 1983 for both sexes, the participation rates for men show a decline in the eighties from 1960 and 1970. This follows a national trend towards decreased participation rates for men, while women show an increase during the eighties which is also a national trend. During the seventies the overall participation rate for women increased from 39.0 to 53.7 in 1980 as many women entered the labor force for economic and social reasons.

The overall stability, or in some cases, decline in rates from 1980 to 1983 is due to a general decrease in the labor force compared to the population as a whole. In 1980 the labor force was 64.3 percent of the over 16 population. In 1983 it was 63.3 percent. Also, it is important to note that this is only a three year period compared to the ten year spans from 1960 to 1970 to 1980. The economy in the 1970's was much better than it is now, or is expected to be in the near future. Idaho saw a great period of growth during the seventies and the eighties have only seen slow economic and population growth.

Table 9 shows average monthly employment for calendar year 1980. This shows monthly employment by industry and county covered by the Idaho Employment Security Law.

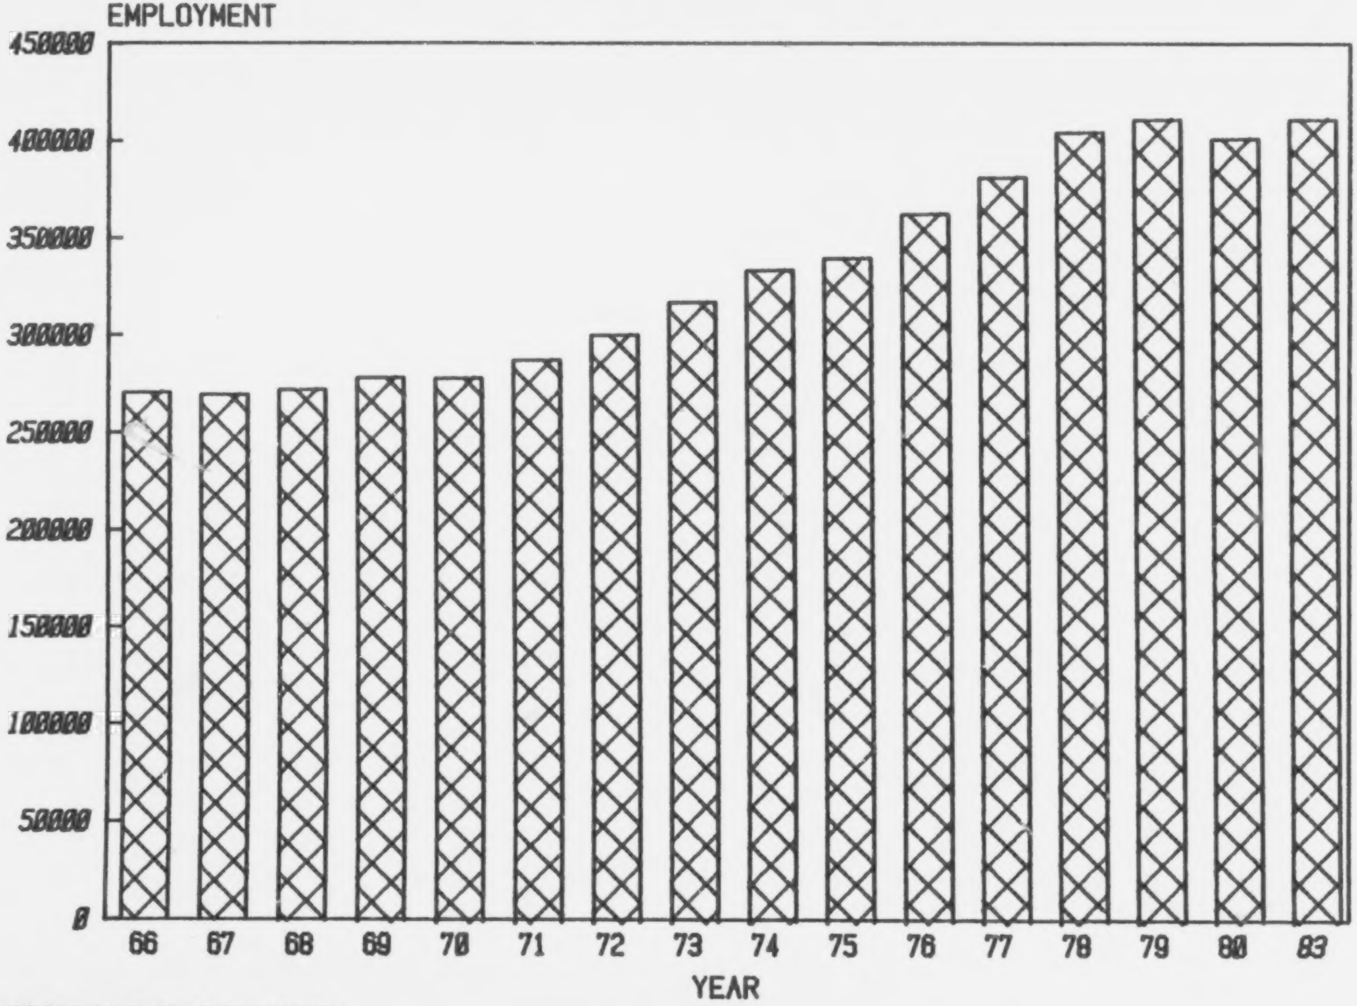
FIGURE G

IDAHO EMPLOYMENT

1966-1980, 1983



IDAHO DEPARTMENT OF EMPLOYMENT

Unemployment

The number of unemployed in Idaho for 1980 was 28,278, while the number projected for 1983 is 26,400.

The unemployment rate shows the relationship of the unemployed to the labor force as a whole. Figure I compares rates for 1970, 1980, and 1983. The 1983 projected unemployment rate for Idaho is 6.0. Although 6.0 seems high, it shows improvement over the 6.5 rate for 1980 in anticipation of a slowly improving economy for 1983.

The number of unemployed is highest for the 25-34 year age group as illustrated in Figure H. This is a large population group and when compared to the labor force as a whole, this group has a relatively low unemployment rate (Figure I). This indicates that many of the people in this group are employed.

The highest unemployment rate is for youth. Young people are new to the labor market and many are inexperienced workers. Many times they will have several jobs before settling down to permanent employment.

Also included here are tables with data from the Current Population Survey (CPS) giving various characterisitcs of the unemployed.

Occupational Information

Table 15 is a preliminary listing of the 100 occupations expected to provide the most new jobs in Idaho for the years 1980 to 1985. When ranked by absolute change in numbers Sales Clerks and Sales Representatives lead the list along with General Office Clerks and Secretaries. The Service Occupations of Waiter/Waitress, Cashier, and Janitors, Porters and Cleaners are also high on the list. The Professional occupations of Professional Nurse and Teachers also rank among the top ten. These projections come from the Occupational Employment Statistics (OES) program at the Department of Employment.

Table 16 on page 39 gives a comparison of the number of unfilled job openings by state and area for the third quarter of 1981, second quarter 1981, and third quarter 1980. The following table lists job openings received and filled during fiscal year 1981 at Idaho Job Service offices. These tables were taken from a quarterly report, Unfilled Job Openings and Available Applicants, 3rd Quarter, 1981, which was the final one published by the Research and Analysis Bureau. Because there is constant change in openings available, as new openings occur and other jobs are filled or cancelled, these tables can only provide a feel for the available openings in the state.

Table 15

Statewide Unfilled Job Openings

On September 30, 1981, Idaho's 26 Job Service offices reported a total of 1,348 unfilled job openings. This was a decrease of 261 (16.2 percent) from second quarter 1981 and a decrease of 404 (23.1 percent) from third quarter 1980. Of the total, 598 openings had been for 30 days or more. Four of the seven areas experienced a decline in the number of unfilled openings, while Areas I, V, and VI increased from last quarter. All but Area V decreased from last year.

Unfilled Job Openings
End of Quarter
by State and Area

	3rd qtr. 1981	2nd qtr. 1981	3rd qtr. 1980
State Total	1,348	1,609	1,752
Area I	154	138	221
Area II	67	76	177
Area III	74	371	165
Area IV	276	499	477
Area V	387	147	261
Area VI	269	253	326
Area VII	121	125	155

Agricultural, Fishery, Forestry, and Related Occupations was the largest category statewide this quarter with 401 openings. The next two highest categories were Clerical and Sales and Service Occupations with 259 and 260 unfilled openings respectively.

Wages offered for jobs listed ranged from $1.44 per hour for Babysitters to a high of $22.69 for a Chief Business Programmer.

There is a constant change in openings available, as new openings occur everyday and others are filled or cancelled.

Up-to-date information can be obtained by contacting a local job service office.

(1) Data are not shown when they do not meet BLS standards of reliability for the particular state, based on the sample in that state.

(2) Estimates are not shown where there are less than 500 persons employed or unemployed.

Note: Items may not add to totals because of rounding. Unemployed persons with no previous work experience are not shown separately but are included in the total. Unemployment rates shown were calculated by using rounded data.

SOCIO-ECONOMIC CHARACTERISTICS

While these types of statistics are particularly useful in planning, they are also difficult to obtain on a regular basis. Although the 1970 census offers a good breakdown of many of these characteristics, it is also woefully out of date at this time. There are a few characteristics available from the 1980 census although most of the data has not been released yet. Included in the following pages are reprints of tables found in the Survey of Income and Education (SIE), and tables of information contained in SIE and Current Population Survey (CPS) publications.

The SIE, carried out in the spring of 1976, was conducted to fulfill requirements of the Education Amendments of 1974 (Public Law 93-280, Section 822(a). The SIE was administered by the Bureau of the Census at the request of the Department of Health, Education, and Welfare. The Bureau of the Census carried out this legislative mandate by augmenting the regular March 1976 Current Population Survey with a supplemental general population sample of approximately 151,000 household interviews.

The major purposes of the SIE were to collect information necessary to (1) determine the number of school age children in each state living in families with incomes below the poverty level; (2) ascertain the number of persons who because of limited English-speaking ability are in need of bilingual educational teaching guidance and counseling; and (3) provide information on a number of other subjects including school enrollment, food stamp and public assistance recipients, housing tenure and outlays, liquid asset holdings, child and adult disability, and public and private health benefit coverage.

Figure L is a pie chart illustrating the marital status of persons 15 years and older by sex. By far, the largest percentage of people are in the Now Married Except Separated category.

Figure M graphs the Idaho annual average weekly spendable earnings both unadjusted and adjusted to the Consumer Price Index for 1970 through 1980. With the CPI adjustment, weekly spendable earnings have remained at about the same level over the ten years, with a slight decrease in 1980.

Table 23 lists the 1980 annual wages in Idaho by industry and county covered by the Idaho Employment Security Law.

Persons In Poverty

Until the 1980 census is released, it is necessary to estimate the number of persons in poverty using the most current available data. The following formula was used to estimate persons in poverty for 1983:

(10.3 X .9) 981,877 = 91,020

The 1976 Survey of Income and Education (Table 22, p.49) poverty rate for Idaho was 10.3. This was multiplied by nine-tenths because it was determined through Current Population Survey (CPS) national data that although Idaho's population has increased considerably since the 1970 census, the percentage of persons in poverty has declined. This was then applied to the population total to obtain the estimated number of persons in poverty for fiscal year 1983, 91,020.

Table 35 illustrates the Office of Management and Budget poverty levels for fiscal year 1982. This table lists income levels by location and family size.

Table 35

OMB POVERTY LEVELS FOR FISCAL YEAR 1982

Family Size	All States Except Alaska & Hawaii Non-Farm	All States Except Alaska & Hawaii Farm	Alaska Only Non-Farm	Alaska Only Farm	Hawaii Only Non-Farm	Hawaii Only Farm

ESARS

The last section of the statewide data is a copy of the latest (Fiscal Year 1981) Department of Employment ESARS report. ESARS stands for Employment Service Automated Reporting System. This report is a matrix of information concerning job applicants on file at local Idaho Job Service offices. Because the selection process is based simply on those members of the labor force who chose to list themselves at a Job Service office, the system is obviously not designed to be a representative sampling of the Idaho labor force. If this restriction is kept in mind, however, the level of detail in this matrix can be useful when trying to form an image of the Idaho labor pool. Table 36 gives some accumulated totals for FY'81 taken from ESARS Table 91.

One must understand that the data in this matrix are not accumulative totals but a record of those applicants on the master file on September 30, 1981. For example, if an applicant went from economically disadvantaged to non-disadvantaged before the September 30 cut-off date he would not be counted in the Economically Disadvantaged category. Because a person's UI Claimant status or his economic status could change during the year, these two categories are likely to fluctuate from the yearly accumulated totals. Other categories such as Handicapped or Veteran status aren't as likely to change during the course of the year.

BOISE SMSA

INTRODUCTION

The last section contains Boise SMSA tables and narrative to use as a planning tool for those involved in planning employment and training programs. Ada County (Boise SMSA) has the largest population of any county in Idaho and constitutes the only Standard Metropolitan Statistical Area in the state. For CETA planning purposes it was a separate planning unit (Area Seven) but for most planners the Boise SMSA is included in Area Three.

The first table in this report is an age, sex breakdown of the population. Some 1980 census data are also included. The next items in the report are labor force projection tables detailed by age, sex and type of employment. Also included in this report are projections of persons in poverty. The final tables in this planning report are reprints of the ESARS (Employment Service Automated Reporting System) matrices compiled by the Department of Employment.

Population

Ada County contains Boise, the state capital, and is a center of activity for business and government and has the largest county population in the state. Ada County has grown considerably since the 1970 census and growth is expected to continue, however, it shouldn't grow as rapidly as in the 70's. There was a 54.2 percent increase in the Ada County population from 1970 to 1980. The projected population figure for 1983, 179,991, shows a growth of 4.0 percent over the 1980 census. Table B-1 gives the population projections by age and sex. Table B-2 shows this information for 1980. Following these, are other tables and graphs of 1980 census breakdowns of age and sex and race.

Labor Force and Employment Status

The following table shows labor force data for 1980 and 1981 and projections for 1982 and 1983. Reading across the table one finds decline in Total Employment in 1981 with some growth beginning in 1982 and 1983 as slow improvement is predicted for the country's economy.

Figures B-C and B-D graph employment trends by industry from 1976 through 1983. Figure B-C graphs Total Nonagricultural Wage and Salary Employment. Figure B-D shows employment in selected industries. Each illustrates the decline in the growth of the seventies as high mortgage rates, restrictions on consumer credit and the recession affected major industries.

Table B-4

Labor Force and Employment Trends

	1980	1981	1982	1983
Resident Civilian Labor Force	90,603	88,800	89,600	91,900

PERSONS IN POVERTY

In the 1970 Census there were 11,404 economically disadvantaged people in Ada County. For 1983, the number of persons in poverty for Ada County has been projected to be 13,019. This number was obtained by the use of this formula:

$$\frac{10.3}{13.2} \times .9 \times 10.3 \times 179{,}991 = 1983 \text{ persons in poverty.}$$

Because the 1970 Census data are so out of date, it was necessary to take other factors into consideration. The 1970 Census Idaho poverty rate is 13.2. The 1976 Survey of Income and Education (SIE) poverty rate for Idaho is 10.3. Nine-tenths was used because it was determined through Current Population Survey (CPS) national data that although Idaho's population has increased considerably since the 1970 Census, the percentage of persons in poverty has declined. This was then multiplied by 10.3, which is the Ada County poverty rate from the 1970 Census. When applied to the population, the number of persons in poverty was 13,019.

Table B-5

JOB SERVICE APPLICANTS

The first two tables in this section provide job opening information from the local Job Service offices in the state. Table B-6 provides information on applicants and job openings for selected occupations. Table B-7 gives information on openings which remained unfilled at the end of the quarter. These tables were taken from a quarterly report, Unfilled Job Openings and Available Applicants, 3rd Quarter, 1981, which was the final one published by the Research and Analysis Bureau. Because there is constant change in openings available, as new openings occur and other jobs are filled or cancelled, these tables can only provide a feel for the available openings in the state.

The last tables are reprints of the ESARS (Employment Service Automated Reporting System) matrices for fiscal year ending September 30, 1981, compiled by the Department of Employment. These matrices give a far more detailed picture of the labor force than can be obtained elsewhere, but they are not necessarily a representative sampling of the Ada County labor force. They do however, represent all the people who registered with the Job Service in Ada County. Planning Area Seven on the tables is the Boise SMSA.
